Manuscript Type

Research Paper

Keywords

Construction Industry, Quality function deployment, Quality Management

Date Assigned:

19-Sep-2020

Date Review Returned:

11-Oct-2020

req 1. Originality: Does the paper contain new and significant information adequate to justify publication?

Yes, the paper shows how quality management courses at graduate levels can equip graduates whenever they enter the construction market and contribute to the application of quality in Pakistan's infrastructure construction.

req 2. Relationship to Literature: Does the paper demonstrate an adequate understanding of the relevant literature in the field and cite an appropriate range of literature sources? Is any significant work ignored?

An appropriate range of literature sources is covered.

req 3. Methodology: Is the paper's argument built on an appropriate base of theory, concepts, or other ideas? Has the research or equivalent intellectual work on which the paper is based been well designed? Are the methods employed appropriate?

A more systematic approach to the research method has been modified and added.

req 4. Results: Are results presented clearly and analysed appropriately? Do the conclusions adequately tie together the other elements of the paper?

The discussion of the results has been modified and explained in detail.

req 5. Implications for research, practice and/or society: Does the paper identify clearly any implications for research, practice and/or society? Does the paper bridge the gap between theory and practice? How can the research be used in practice (economic and commercial impact), in teaching, to influence public policy, in research (contributing to the body of knowledge)? What is the impact upon society (influencing public attitudes, affecting quality of life)? Are these implications consistent with the findings and conclusions of the paper?

The implication of the study of quality management in the construction industry in Pakistani universities has been provided.

req 6. Quality of Communication: Does the paper clearly express its case, measured against the technical language of the field and the expected knowledge of the journal's readership? Has attention been paid to the clarity of expression and readability, such as sentence structure, jargon use, acronyms, etc.

Yes.

The myth of a direct relationship between organizational culture and TQM: propositions and challenges for research

Author's Response

Manuscript Type

Research Paper

Keywords

Quality Assurance, Quality culture, Construction Industry

Date Assigned:

18-Apr-2020

Date Review Returned:

30-May-2020

req 1. Originality: Does the paper contain new and significant information adequate to justify publication?

Overall, this is an average article within the area of quality management.

req 2. Relationship to Literature: Does the paper demonstrate an adequate understanding of the relevant literature in the field and cite an appropriate range of literature sources? Is any significant work ignored?

- The author(s) should primarily explain the differences between quality, QMS, TQM, and QA.
- Since the core of the paper is about coursework for imparting knowledge of quality management in Universities pertinent to construction, the authors should critically draw on the existing literature the gap between the theory and practices of quality, QMS, TQM, and QA, and their situation when are taught as coursework materials for teaching the quality management in the construction industry.
- Since the practice of quality management in the construction industry has been developing rapidly, the author(s) should use the references less than five years of publications.

req 3. Methodology: Is the paper's argument built on an appropriate base of theory, concepts, or other ideas? Has the research or equivalent intellectual work on which the paper is based been well designed? Are the methods employed appropriate?

- The author(s) should define the research problems clearly, to determine the purpose of the study precisely. It is mentioned about the development of a framework for imparting the QM knowledge, what is the novelty of the framework? So that it can be based to determine comprehensive coursework for teaching QM in the construction industry?
- Since the literature review does not produce the study variables, how does the author(s) determine the variables?
- Is there any reliability test for the questionnaire construction?
- There are some fundamental areas missing in the methodology section. How does the author(s) justify the population frame, sample size, sampling technique, and analysis methods?

req 4. Results: Are results presented clearly and analysed appropriately? Do the conclusions adequately tie together the other elements of the paper?

The author(s) need to ensure that the study's findings and conclusions are addressing the research problems and purpose of the study. The discussion of the results is missing from the paper; readers would have expected that the comprehensive coursework for imparting knowledge of quality management in Universities pertinent to construction has been built empirically provable.

req 5. Implications for research, practice and/or society: Does the paper identify clearly any implications for research, practice and/or society? Does the paper bridge the gap between theory and practice? How can the research be used in practice (economic and commercial impact), in teaching, to influence public policy, in research (contributing to the body of knowledge)? What is the impact upon society (influencing public attitudes, affecting quality of life)? Are these implications consistent with the findings and conclusions of the paper?

The author(s) are encouraged to reflect on the impact of the study for research, practice, and society as these are presently missing from the paper.

req 6. Quality of Communication: Does the paper clearly express its case, measured against the technical language of the field and the expected knowledge of the journal's readership? Has attention been paid to the clarity of expression and readability, such as sentence structure, jargon use, acronyms, etc.

The author(s) need to proofread the paper thoroughly for the quality of communication.

Recommendation
