Recommendation

Major Revision

Would you be willing to review a revision of this manuscript?

No

Confidential Comments to the EIC

Comments to the Author

The author(s) need to revise the manuscript to improve the quality of the manuscript and to achieve readers' interest and better understanding.

1. Abstract

The author(s) need to identify any implications for research, practice, and or society.

2. Introduction

The author(s) need to identify any problems that relate to the practices of project management in constructing sustainable buildings. The description on page 3 lines 9-18 needs to be elaborated.

3. Literature Review

Since this paper aims to develop a theoretical framework on project-related factors affecting project

management practices in sustainable buildings, the author(s) need to depict the roles of each critical project-related factor on sustainable construction within project management practices. There is more literature needed within the last three years.

4. Research methodology

The methodology is not extensively discussed. The author(s) should explain: Why did the data collection use a questionnaire technique? Some fundamental areas missing, among which are the population frame, sample size, sampling technique, and methods of data analysis.

5. Results and discussions

The author(s) are strongly encouraged to discuss the results of this study towards the literature reviews, and the findings of the study are addressing the research problems and objectives of the study.

6. Conclusion

The author(s) need to describe any implications of the study for research, practice, and or society. Does the paper bridge the gap between theory and practice?

7. The study requires a full edit for language and grammar.
