Cases of child rights violations in Indonesia has growing fast. The Indonesian National Commission for Child Protection recorded during the year 2013 there were 2792 cases of violation of child rights which is 1,424 were cases of violence, including bullying children at school. In this research, the meaning of children bullying is the use of violence from friends, teachers or school authorities for abusing or intimidating the children. The impact of bullying children will result in a psychological condition and often makes children lazy to go school. The purpose of this study was to determine the understanding of teachers and parents about the bullying children at school and also providing design for handling cases of bullying children at school. The approach used in this study is a qualitative approach. Setting research in Islamic Kindergarten at Kartasura Sukoharjo and also Boyolali, Central Java. Subjects of this study are the teachers, parents and students at those schools. Collecting data using interviews, observation and document analysis. Data were analyzed through data reduction, data display, and verification of data which run simultaneously. The results of this study showed that the majority of parents and teachers do not understand the problem of bullying children at school, even teachers often do it in learning without realizing it. The design of handling cases of bullying in schools by giving special treatment to students as subject and victims of bullying. Students who bully are not included in play activities, and asked to enter in a room (Think room) in order to realize his mistake. Students as victim is given motivated and activities that will make them forget bad experienced in bullying cases. Teachers communicate with parents to help restore students' motivation and psychological conditions.
